relay outputs.

## TECHNICAL FEATURES

TM210 transmitter can measure up to two temperatures (temperature 1 and temperature 2). When two temperature probes are connected, the transmitter can display the difference between both measured temperatures. It can also calculate different parameters in psychrometry thanks to the KHP psychrometric probe available as option (only for models with two Pt100 terminal blocks).

## TECHNICAL FEATURES OF THE TEMPERATURE PROBES

Different Pt100 temperature probes are available on the range -100 to +400°C with different types of contact tip (straight stainless steel, angled stainless steel, with penetration tip...). Please contact us in order to define the type of probe that corresponds to your need.

<sup>1</sup> Calculated value.

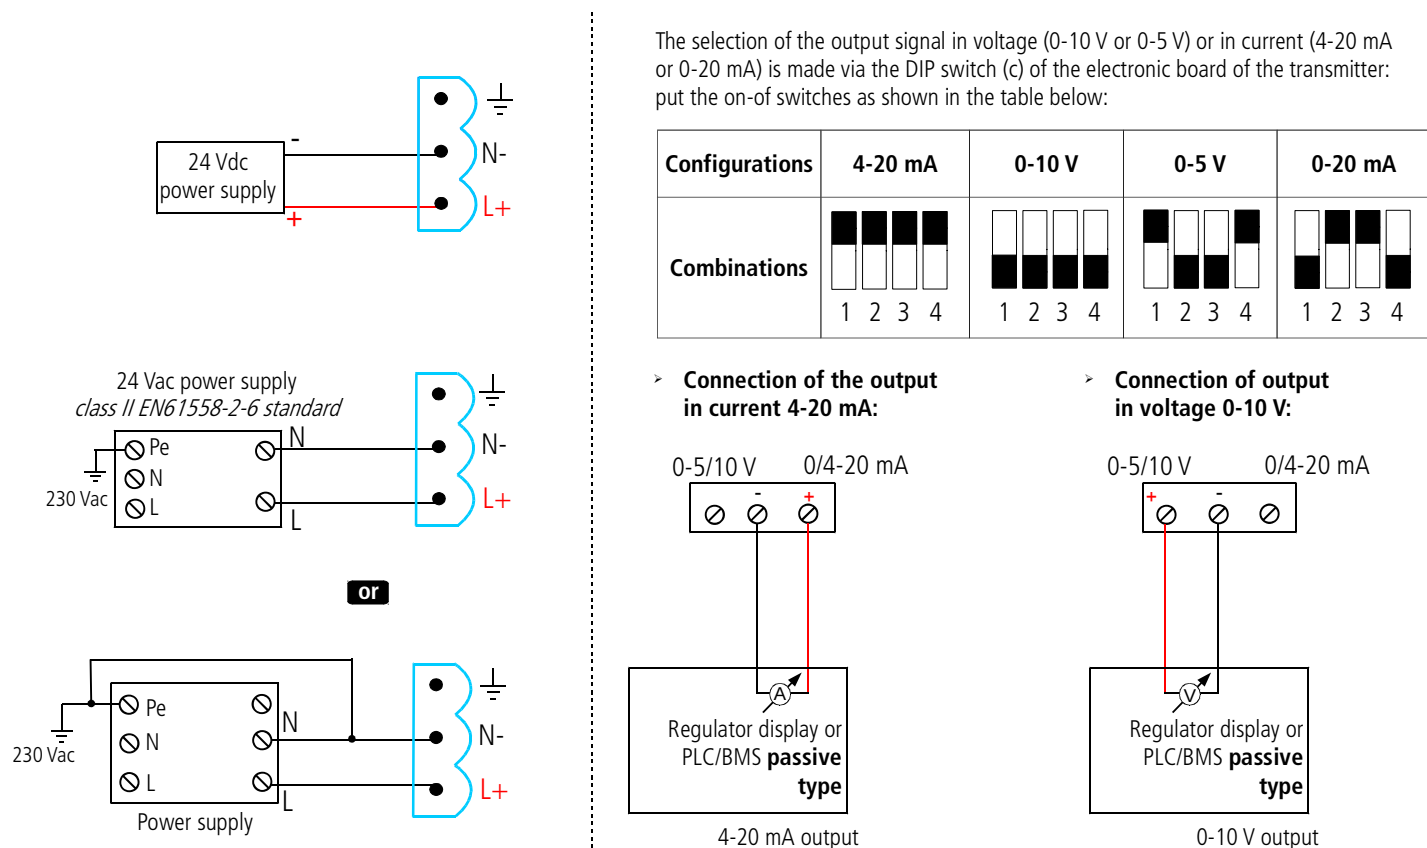

<sup>2</sup> All the accuracies indicated in this technical datasheet were stated in laboratory conditions, and can be guaranteed for measurements carried out in the same conditions, or carried out with calibration compensation.

## CONNECTIONS

## ELECTRICAL CONNECTIONS – as per *NFC15-100* standard

**⚠ This connection must be made by a formed and qualified technician. To make the connection, the transmitter must not be energized. The presence of a switch and a circuit breaker upstream the device is compulsory**

## CONFIGURATION OF THE TRANSMITTERS

It is possible on the class 210 to configure all the parameters of the transmitter: units, measuring ranges, outputs, channels, calculation functions, etc, via different methods:

- **Keypad** for models with display: a code-locking system allows to secure the installation (See class 210 transmitters user manual).
- **Software** (optional) on all models. Simple user-friendly configuration. See LCC-S user manual.

### Configurable analogue output:

It is possible to configure your own intermediary ranges

**Caution:** the minimum difference between the high range and the low range is 20.

Configure the range according to your needs : outputs are automatically adjusted to the new measuring range

## MOUNTING

To mount the transmitter, mount the ABS plate on the wall (drilling: Ø6 mm, screws and pins are supplied).

Insert the transmitter on the fixing plate (see A on the drawing beside). Rotate the housing in clockwise direction until you hear a "click" which confirms that the transmitter is correctly installed.

## CALIBRATION

**Outputs diagnostic:** With this function, you can check with a multimeter (or on a regulator / display, or a PLC / BMS) if the transmitter outputs work properly. The transmitter generates a voltage of 0 V, 5 V and 10 V or a current of 4 mA, 12 mA and 20 mA

**Certificate:** Class 210 transmitters are supplied with adjusting certificates. Calibration certificates are available as an option.

## MAINTENANCE

Please avoid any aggressive solvent. Please protect the transmitter and its probes from any cleaning product containing formalin, that may be used for cleaning rooms or ducts.

## OPTIONS AND ACCESSORIES

- **LCC-S:** configuration software with USB cable
- **Calibration certificate**

- **Pt100** temperature probes
- **KHP:** psychrometric probe

Only the accessories supplied with the device must be used.

## PRECAUTIONS FOR USE

Please always use the device in accordance with its intended use and within parameters described in the technical features in order not to compromise the protection ensured by the device.

Once returned to KIMO, required waste collection will be assured in the respect of the environment in accordance with European guidelines relating to WEEE.
